Introduction

Chapter 1

Part 1

1.1 Introduction

1.2 Response Time analysis

1.2.1 Response time analysis per processing unit

Table 1.1: By running the Matlab script `ResponsetimeAnylsis_FPP.m` with the parameters given for PU1 and PU2 these response times are obtained

PU1	T_1	T_2	T_3	$T_4 (T_s)$
ms	0.1	2.1	4.1	7.2
PU2	T_5	T_6	T_7	T_8
ms	6	3	9	5

1.2.2 Response time analysis for the CAN bus messages

1.3 System model

1.4 Design decision

1.5 Results

Firstly: Response time analysis

Secondly: Control system input and output

Chapter 2

Part 2

2.1 Introduction

2.2 Response Time analysis

2.2.1 Response time analysis per processing unit

2.2.2 Response time analysis for the CAN bus messages

2.3 Optimisation for sensor-to-actuator delay

2.4 System model

2.5 Design decision

2.6 Results

Firstly: Response time analysis

Secondly: Plots from chronVIEW (before and after optimization)

Last: Control system input and output

2.7 Conclusions

Chapter 3

Part 3

3.1 Introduction

3.2 Answer all the questions

3.2.1 Theoretical analysis versus actual implementation

3.3 Design decision

3.4 Results

Firstly: Solution to the design problem. (Include the parameters you have chosen)
Secondly: from chronVIEW for your design

3.5 Conclusions

3.6 Results

3.7 Conclusion
